The cost of production of white glazes is determined by
the kind of opacifier employed. Examples are given.
The principle of white opacity is explained. Opacity
can be classified under three types: (1) the opacifier
does not dissolve in the glaze. (2) the dissolved opaci-
fiers separate out again or separation is present. (3)
gaseous opacity. The various industrial opacifiers are
discussed from the standpoint of how the composition of
